# A Wonderful New Melon

OR LARGE CANTALOUPE

## “OKA”

In our world wide search for rare flowers we discovered a wonderful Melon or Cantaloupe originated by an eminent Priest in Canada, called “OKA”. This Melon grows up to ten pounds. It has been tested by us thoroughly. The leaves are dark green, unlike any other melon vines. The flesh is a bright salmon, the outside a beautiful cream. The flavor is the most delicious of any melon we have ever tasted. Produce experts in New York, Philadelphia, Boston and other large market centers pronounce it excellent in quality. We think gardeners of large estates can produce even on a limited space melons for their wants that will surprise them. We picked from forty hills, season of 1929, a continuous supply of melons of the finest quality from August 10th to October 14th. This season can be prolonged by placing melons in cold storage at a temperature of 35 to 38 degrees. They are good keepers.

Seed of our own raising from selected melons \$4.00 per ounce. Trade packet sufficient for several hills, \$1.00 each.

Supply limited this season.
